COLORADO/NATIONAL ACEP ACTIVITIES

Colorado ACEP Legislative Advocacy Fellow – 2019-2020

Testimony at the Senate Judiciary Hearing on April 15, 2019

Met with Senator Gardner's Regional Director on July 23, 2019 regarding out of network billing legislation

Legislative Advocacy Conference – Physician Advocate - 2018 and 2020

CANDIDATE STATEMENT:

During this last year, as the legislative advocacy fellow, I have developed a growing interest in the business of Colorado ACEP. I am committed to continuing to advocate at both the state and national level to protect our profession and our patients. With more balanced billing legislation coming down the pipe along with potential cuts to emergency physician Medicare reimbursement, it is more important than ever to work with legislators and educate them about how this will affect their constituents and local hospitals.

I have appreciated the engaged and proactive manner in which our board members worked together to coordinate conferences with emergency medicine physicians across the state to share PPE concerns, volume contraction data and best practices during our current COVID-19 pandemic. It is impressive what we can accomplish when we work together, instead of in silos.

After discussions with several of my colleagues, I feel that there is an opportunity to develop another such group via a young physicians' section. With the proliferation of contract management groups across the United States and more specifically in Colorado, there has been an increased focus in emergency medicine on hitting certain budgetary metrics. This has pushed emergency medicine physicians out of the emergency department and replaced them with the less expensive and less experienced advanced practice providers. I fear this practice will only become more widespread, if emergency medicine physicians remain passive on the sidelines. There has been a move toward staffing small rural emergency departments with nurse practitioners and physician assistants with the stated goal of meeting the needs of the community, but I do not think this scope of practice creep will end in rural America. I am concerned that these practitioners with only two to three years of post-graduate medical training compared to physicians with seven to eight years of post-graduate medical training will continue to encroach on our practice, offer suboptimal care for our patients and and erode the integrity of our profession. I see the utility of working with advanced practice providers but I am concerned that in our enthusiasm to meet budgets, we will sell ourselves short and lose our profession to these capable but significantly less well-trained individuals. I am interested in further delving into this topic and coming up with proactive actions that Colorado ACEP via this young physicians section could produce.
